GetItems

Description

Given an Item identifier, the GetItems operation returns some or all of the item attributes, depending on the resources specified in the request.

GetItems supports the following high-Level resources:

- [BrowseNodeInfo](#)
- [Images](#)
- [ItemInfo](#)
- [OffersV2](#)

To look up more than one item at a time, separate the item identifiers by commas.

Availability

All locales, however, the parameter support varies by locale.

Request Parameters

Check [Common Request Headers and Parameters](#) for more information on common input parameters. For detailed information on how to create and send a request, refer [Using cURL](#). All GetItems input parameters are listed below:
